

## Project: Monterrey, Mexico

Trans-Logistics Management Services, Inc. recently completed a project in Monterrey, Mexico to be shipped to Colombia. Management of the project consisted of selection and coordination of riggers to dismantle and load a roll form machine and secure in containers for shipment via ocean transport.

Trans-Logistics Management Services coordinated multiple phases of the project to prepare it for shipment to its final destination. Working with area vendors and coordinating local shipments, complete dismantle and shipping were accomplished in a timely manner.

Several pieces required break heavy haul transport from the Monterrey facility to be shipped to Houston, TX for export via break bulk ocean shipping.

Open top containers and high cubes were loaded in Monterrey and shipped to the Port of Tampico in Mexico for ocean export.
